**What executives want from
healthcare analytics**

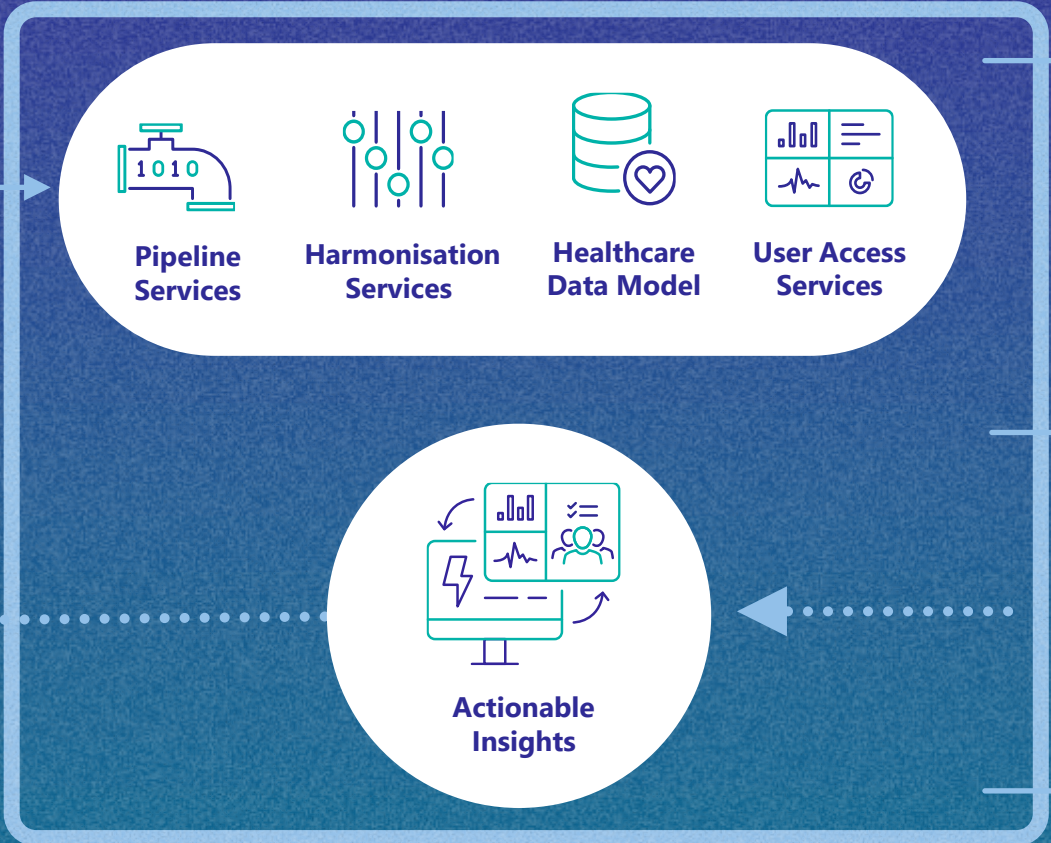

An Analytics Approach

InterSystems Analytics Solution

-  Clinical (EMR)
-  Claims
-  Social Determinants
-  Care Circles
-  Budget/Funding

-  3rd party applications
-  APIs
-  Qlik
-  PowerBI
-  Tableau
-  Excel
-  Real-time business intelligence
-  DataRobot
-  H2O.ai
-  Data science

Organisations want to unlock the data and its true value

1%

Analytics is not aligned to our overall business priorities

9%

Analytics is a priority for our operations team

12%

Analytics is a priority for our clinical team

60%

Analytics is one of the top 5 business priorities of the business

18%

Analytics is intrinsic to all our business priorities

44%

Identification of
patient risk

41%

Improvement in patient
outcomes and experience

36%

Reduction of
clinical errors

34%

Cost
reduction

Main outcomes expected from analytics solutions

“The analytics solution should help the hospital to understand what treatment protocol will work best for each patient and how to provide it at the lowest cost.”

Clinical Executive of a public hospital in metropolitan South Australia

Patients are
at the
core of
investments

Top 3 business priorities of healthcare organisations in ANZ for 2022 - 2023

64%

Compliance with government mandates

46%

Cost optimisation

42%

Improving clinical outcomes

**Building data synergy to resolve
conflicting demands in healthcare**

Key stakeholders' trust in the organisation's data

We have full trust in the data

We have some trust in the data

We are unsure of the data quality

We do not trust the data at all

#1 More than 50% of the key stakeholders do not trust the data fully

Despite the best intentions,
why are healthcare organisations underutilising their data?

Key data challenges of analytics deployments

51%

Data quality

43%

Inability to access
real-time data

38%

Lack of a central
data repository

37%

Integration of analytics
solutions with other systems

**#2 Data quality and access
limit success**

Maturity of healthcare organisations' data strategy in ANZ

24%

Focus on a centralised data repository without a strategy

43%

Focus on data interoperability and real-time access without a strategy

10%

Have a digital transformation strategy with a centralised data repository

6%

Have a digital transformation strategy and real-time data aggregation

17%

Have a digital transformation strategy and interoperable data

#3 Organisations' data strategies may be obsolete

Data analysed by ANZ healthcare organisations

#4 Organisations analyse limited data

“Analytics should allow a multi-dimensional approach to wellness.”

Clinical Executive of a public hospital in metropolitan South Australia

Top 3 business challenges to analytics adoption in ANZ healthcare

Lack of sufficient
IT staff

Securing budget

Lack of staff with a
combination of clinical and
analytical skills

**#5 Organisations' data strategies
are hampered by business challenges**

Gives patients, caregivers,
and care providers the
opportunity to prepare
treatment plans early and
improve quality of life
leveraging AI

Cognetivity Neurosciences Leverages InterSystems Interoperability Technology to Address Dementia

*InterSystems IRIS for Health is
extremely powerful, proven and fully
accepted by the National Health
Service (NHS) and, critically, the
InterSystems team brings with them a
wealth of experience.*

Jonathan El-Sharkawy, Chief
Technology Officer, Cognetivity
Neurosciences

Predictive Analytics to Inform Care

Predictions

Prediction	Description
AI/ML predicts elevated risk for high ED Usage	Elevated Risk For High ED Utilization
AI/ML predicts elevated risk for Diabetes	Elevated Risk For Diabetes

Diagnostics

Study	Date	Details
MAMMO & BREAST U/S		
ElectroCardiograph		
Chest X-Ray		

Diagnoses

Diagnosis	Type	Date	Details
Calculus of gallbladder with acute and chronic cholecystitis without obstruction	F	01/20/2017 18:00	
Hypertensive heart disease	F	01/20/2017 18:00	

Allergies

Allergen	Reaction	Source	Category	Date
Penicillin	Hives		Allergy	

Elevated risk of ED visit in next 12 months

Elevated risk of developing diabetes in next 12 months

Expected changes in current interoperability environment

Want standardisation of data exchange

Want access to real-time data

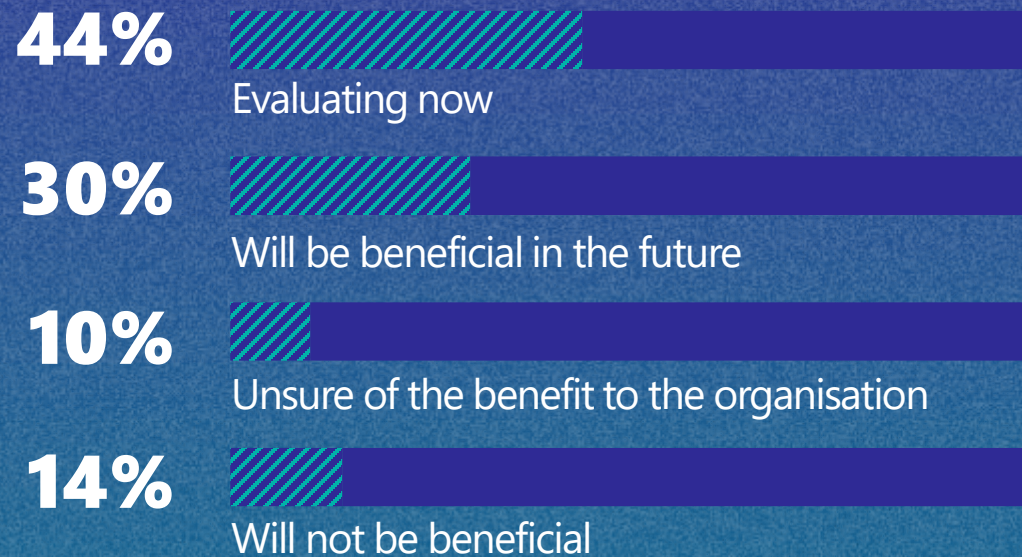

Want to improve transactional workflows across care continuum

ANZ healthcare leaders demand interoperable smart data

“We want software that can accumulate ALL patient data and make it easily accessible on any platform, in real-time.”

Clinical Executive of a public hospital in metropolitan Tasmania

Adoption of smart data fabrics in ANZ healthcare

Organisations are starting to adopt smart data

“Ultimately, we need a decision-oriented solution that functions with complete data transparency.”

CIO of large public hospital in regional Victoria

of healthcare organisations
have analytics either
intrinsic to all business
decisions or as a top priority

of key executives trust
the data fully

have a holistic digital
transformation strategy

want their organisations
to focus more on
standardisation of
data exchange

**Two years of constant disruption has
seen an immense push for healthcare
to transform**
