Fivetran

Make every decision data driven with reliable, high-volume data integration that scales

Fivetran + HVR enables you to continuously replicate and integrate data from SaaS and databases to cloud-based destinations. It is a user-friendly, enterprise-grade solution set for complex, high-volume data needs.

Automate your data operations and save engineering time. Scale your analytics with a rich solution set that enables you to freely add or remove sources based on organizational needs. Deliver with the confidence that our solution meets the most stringent data security standards.

Automated

Fivetran + HVR
- Real-time, log-based CDC enables incremental updates, lower source load and replication latency
- Automated schema mapping, including creation and ongoing maintenance from source to destination
- Schema drift handling to merge new source objects and data type changes, ensuring data completeness

Fivetran
- Regular application connector updates to match API versioning
- Integrated transformations scheduling to update models after each data load

Scalable

Fivetran
- Fully-managed cloud infrastructure
- 190+ fully-managed connectors, with more each year
- 5-minute setup for any new connector to facilitate easy onboarding for new users

HVR
- High-volume replication support for enterprise scale
- Distributed architecture with multiple topology support for optimal output and simplified data flow design
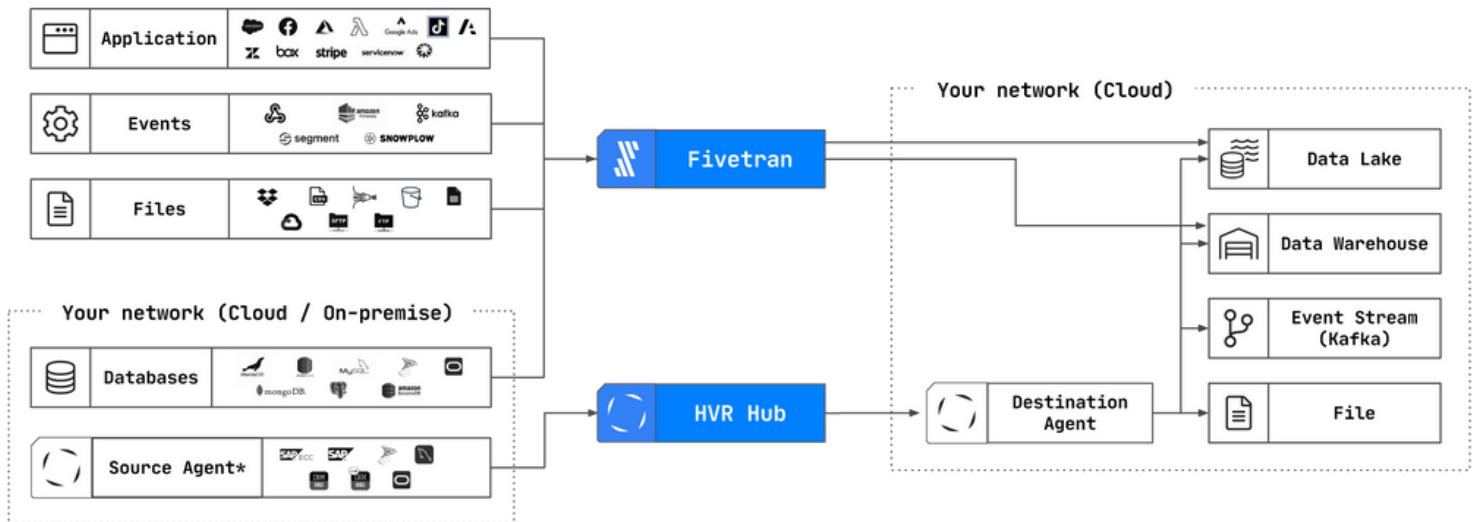

The most secure

Fivetran
- More 3rd-party compliance certifications than any other data integration tool
- Numerous connection options such as SSH, VPN Tunnels, and AWS + Azure PrivateLink
- Role-based access control, field-level blocking and hashing and more

HVR
- Self-deployment for flexibility in setting up user access and encryption wallets
- SSH tunnel routing support to control a singular point of firewall egress
- Encryption end-to-end, both in transit and at rest

A robust solution set for high-volume, continuous data delivery

*For >4.5GB/hour High Volume Replication

Data professionals choose Fivetran

> "Bringing our data sources into our existing SQL Server warehouse would have taken three people two years and cost about $425,000. Fivetran got us there in two months."
>
> Russell Stather, Chief Technology Officer, Ignition Group

Fivetran highlights

- 3,500+ customers
- Trillions of rows synced per month
- Deloitte Fast 500 2021
- Gartner Peer Insights Customers' Choice

- Forbes Cloud 100 2021
- Gartner Magic Quadrant for Data Integration Tools
- G2 Market Leader
- Top 100 Software Company 2021
