# Treating Analytics as Products: Building for Impact

Transforming how we build and scale analytics impact in a world rapidly shaped by generative Al and decision intelligence.

Avalon D'Souza, Director of Analytics

# From Report Factory to Strategic Partner

#### **BEFORE: Report Factory**

- 730+ Reports created but 78% rarely used
- \$1.2M Annual Costs in maintenance expenses
- CEO asking: "How does all this reporting translate to tire sales?"

"How does all this reporting translate to tire sales?" - CEO

#### **AFTER: Strategic Partner**

- 110 Analytics Products with 92% usage rate
- \$100M+ Business Impact in direct value created
- Clear connection between analytics and business outcomes

# We Have More Dashboards Than Decisions

#### **The Problem**

- 70% of dashboards go unused (Gartner)
- Service-desk mentality dominates
- Analysts stuck in reactive mode

### **The Reality**

Dashboards Are Not Deliverables. Decisions Are.

- Reporting ≠ value
- Activity ≠ impact
- Quantity ≠ quality
- Outputs ≠ Outcomes

### Why A Product Mindset Shift Matters in 2025

The analytics landscape faces critical challenges that product thinking can address:

#### **Output Focus & Low Adoption**

Teams celebrate dashboard quantity while investments become expensive shelf-ware

#### **Poor Data Foundations**

Fragmented data foundations undermine enterprise-wide analytics efforts

#### **Tech Debt**

Scattered one-off solutions create unsustainable maintenance burdens

#### **AI Challenge**

Generative tools amplify insights without context, drowning signals in noise

#### **Siloed Teams**

Organizational silos between data engineers, scientists, analysts and business users

These challenges intensify as we approach 2025, making product thinking essential for analytics success.

# A Product Mindset: The Big Shift

#### **Strategy - Organizational Objectives & Key Decisions**

Align with business strategy and decision needs

#### **Intake & Discovery**

Use Data Product Canvas to define scope and value. Ask 5 Whys

#### **Roadmap Management**

Prioritize, Roadmap, Build, test, and launch with clear messaging

#### **Cross-functional Team Alignment**

Bring together technical and business expertise with analytics product manager

#### **High Adoption, Success & Governance**

Measure impact and evolve the product; Champion Product; Promote governed datasets

Each component plays a crucial role in transforming analytics from isolated reports into impactful products that drive business value.

This approach should be adopted for both Data Products and Data-As-A-Product models to flourish.

# Strategic Alignment

### **Business Goals**

Center analytics on company objectives

### **Gap Analysis**

Identify missing insights

### **Value Proposition**

**Proposition**Articulate data's impact on decisions

### The Data Product Canvas

This tool helps transform analytics requests into well-defined analytics products. It's inspired by traditional product management frameworks like the Business Model Canvas

### **Purpose and Benefits**

The Data Product Canvas serves as a blueprint that ensures analytics work is:

#### **Problem-focused**

Starts with business challenges rather than jumping to solutions

#### **Decision-oriented**

Designed to drive specific choices rather than just sharing information

#### **Outcome-driven**

Includes clear metrics for measuring success and impact

#### **User-centered**

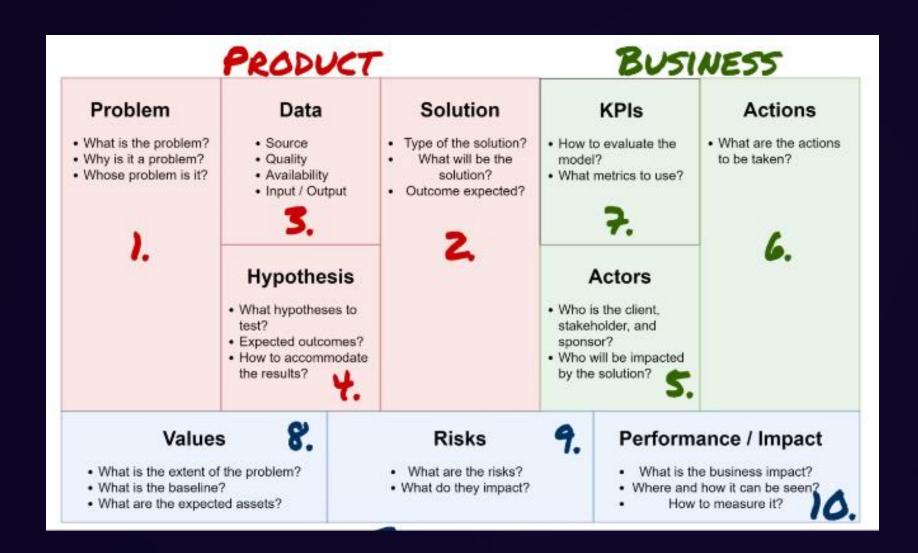

Tailored to specific personas and their unique use cases

#### **Actionable**

Defines concrete next steps to take after insights are delivered

### The Data Product Canvas

This tool helps transform analytics requests into well-defined analytics products. It's inspired by traditional product management frameworks like the Business Model Canvas

#### **Purpose and Benefits:**

#### **Problem-focused**

Starts with business challenges rather than jumping to solutions

#### **Decision-oriented**

Designed to drive specific choices rather than just sharing information

#### **Outcome-driven**

Includes clear metrics for measuring success and impact

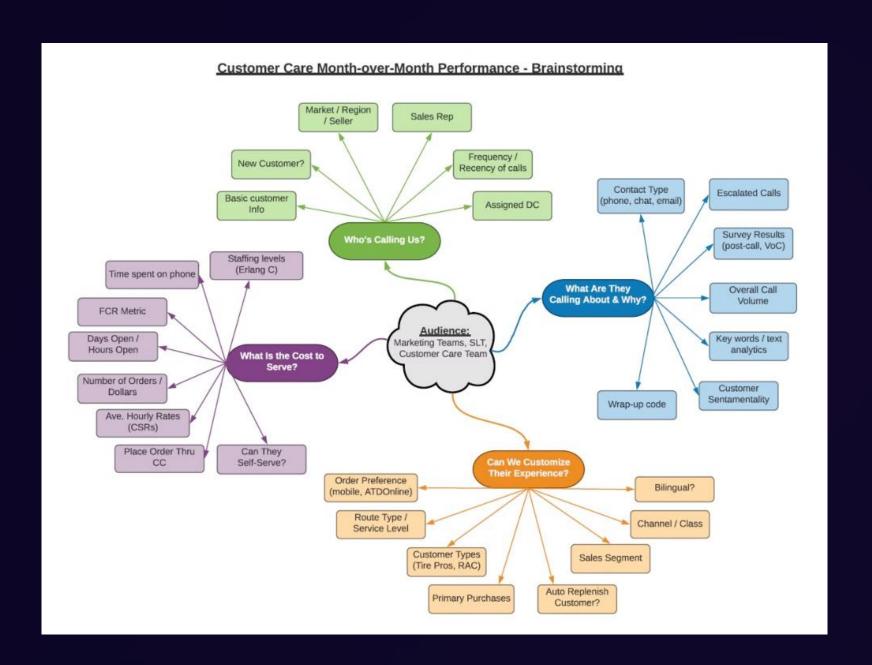

#### **User-centered**

Tailored to specific personas and their unique use cases

#### Actionable

Defines concrete next steps to take after insights are delivered

# Mind Mapping for Ideation

#### **Map Decisions**

Visualize stakeholders and pain points

#### **Find Patterns**

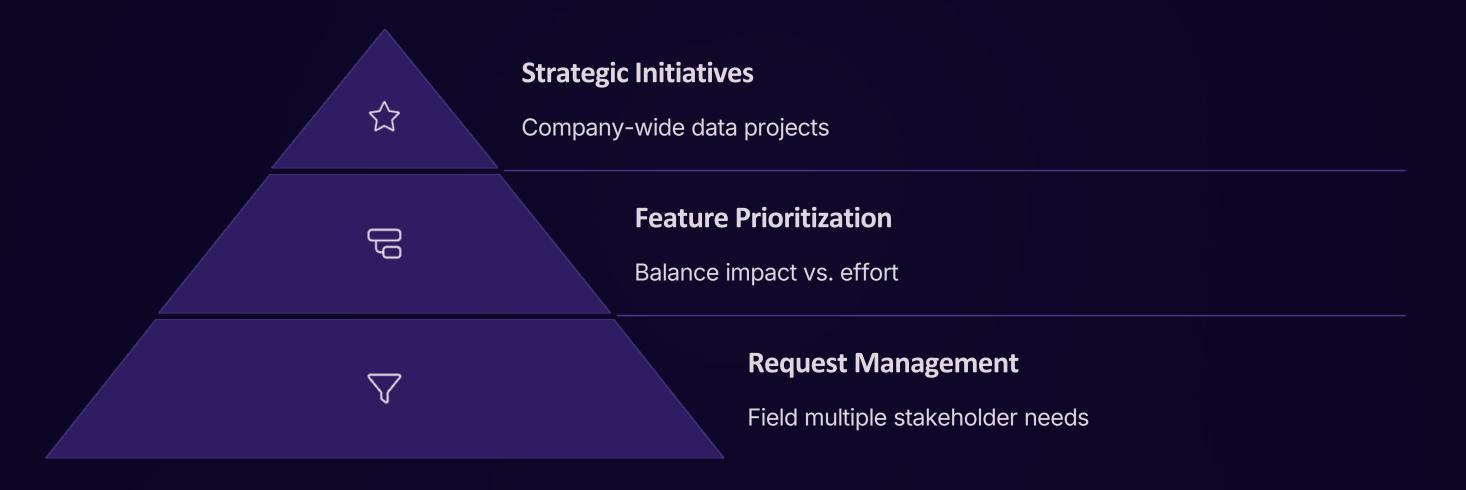

Identify shared needs across teams

#### **Prioritize Impact**

Focus on highest value opportunities

# **Roadmap Management**

# **Driving Adoption**

### Communication

Clear value messaging

### **Training**

Enable self-service analytics

### **Feedback Loops**

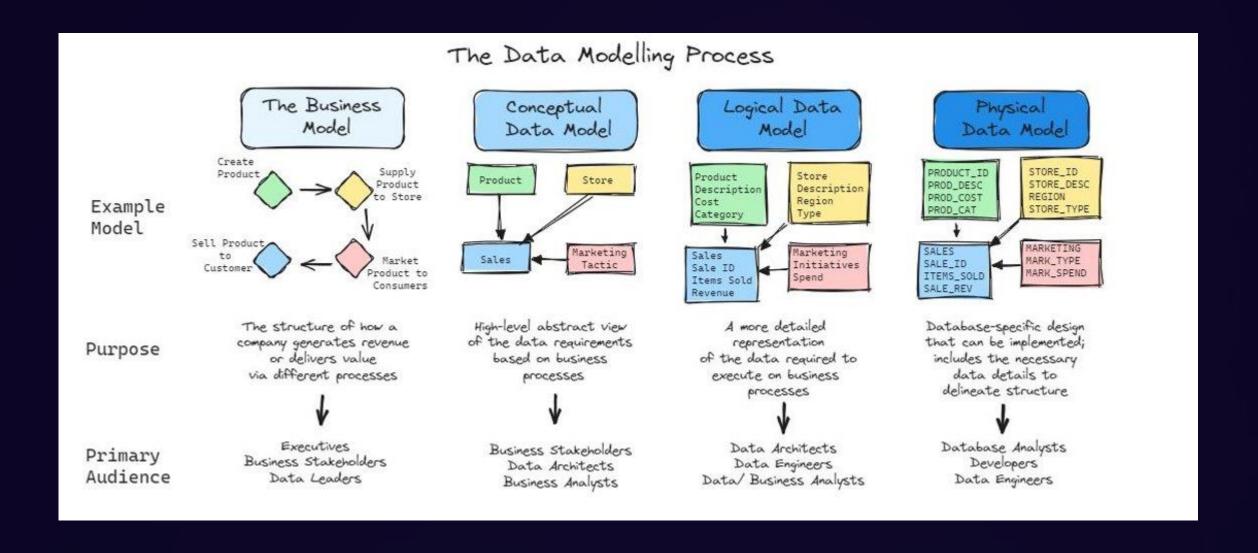

Continuous improvement system

### **Success Stories**

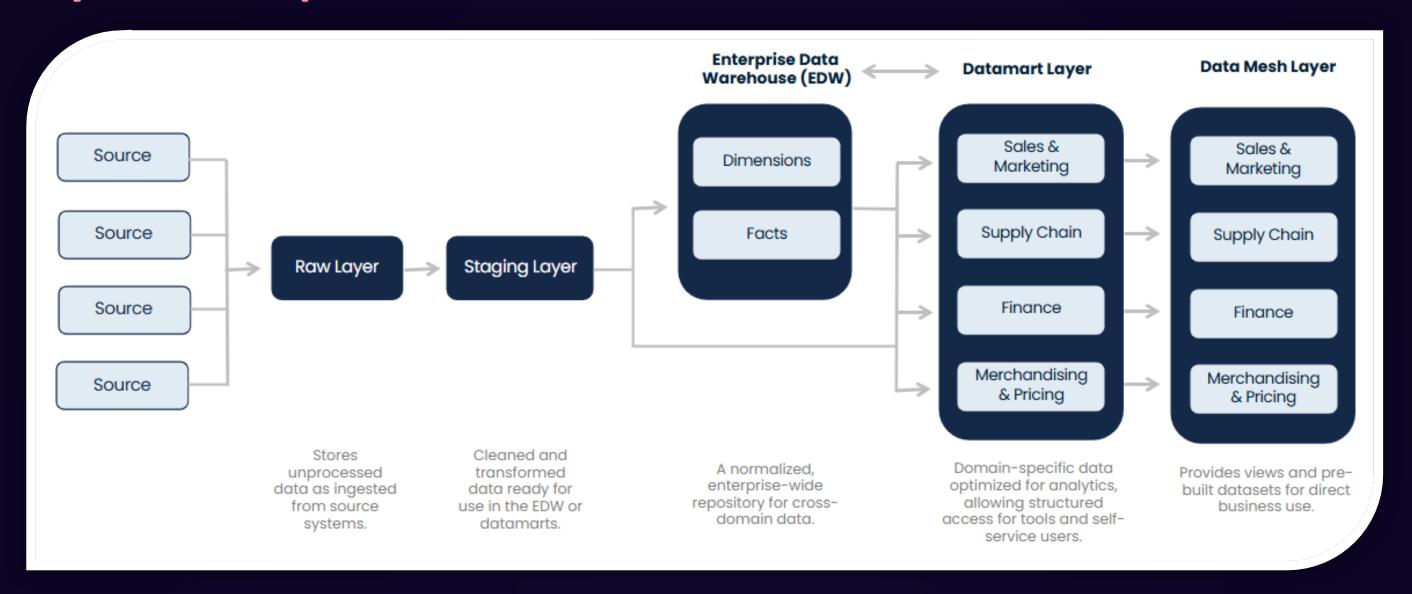

Showcase wins and outcomes

# The Lost Art of Data Modelling

One thing we often miss is how much product thinking should influence our **data modeling**. Just like a product has a user experience, your data model defines the user experience of the data. If your tables and joins don't match how the business thinks, your product will feel clunky, even if the product looks great. Product mindset should lead to better semantic modeling — intuitive, reusable layers that accelerate self-serve and reduce rework

# **Hybrid Enterprise Data Architecture**

**Central Governance** with Domain Agility

**EDW ensures consistency** across enterprise metrics

**Kimball-style marts** empower quick insights and exploration

**Data mesh views** scale delivery and ownership across teams

# **GenAl** — The Analysis Co-Pilot

#### **Your AI Assistant**

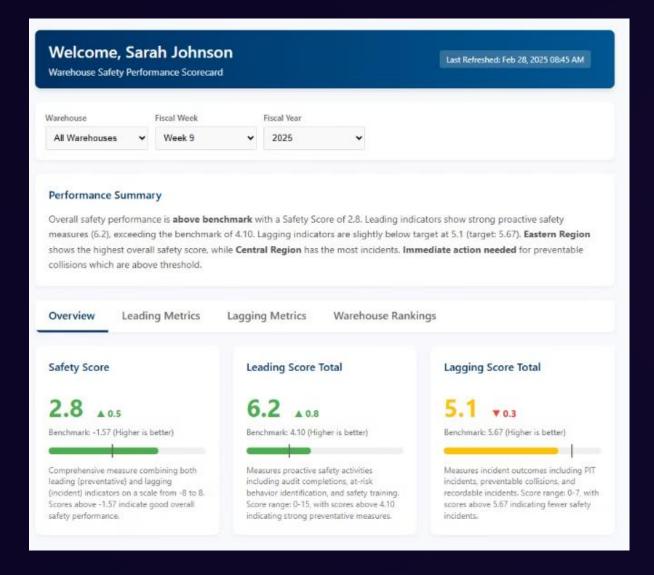

- Intake forms and templates
- UI/UX prototyping
- Mind map generation
- Auto-documentation
- Semantic search/RAG for Q&A

#### **Enhancing the Product Lifecycle**

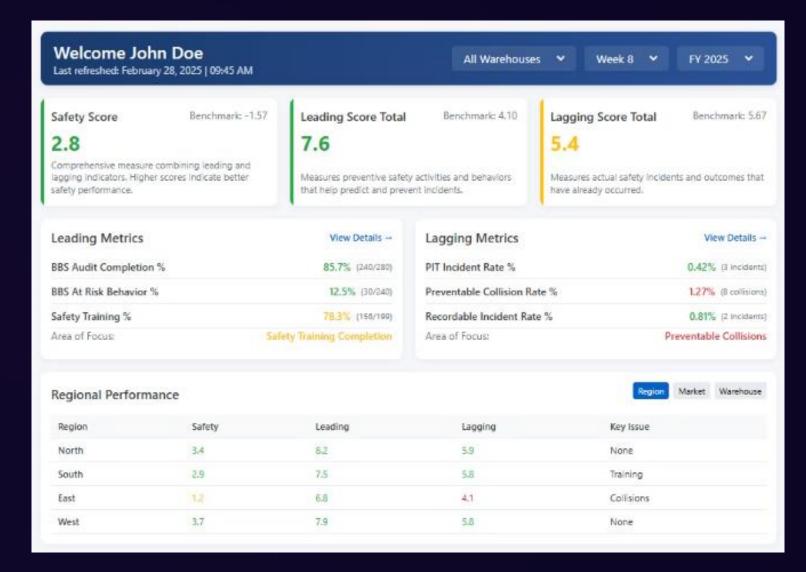

- Discovery: auto-translate needs to stories
- Build: generate visual mocks and queries
- Validate: simulate user feedback
- Documentation & support

# Dashboard Design using GenAl

Mock up #1: Focus on summarizing findings

#### Mock up #2: Focus on Areas of Focus

# **Metrics That Matter**

### **Adoption Metrics**

Daily Active Users/Monthly Active Users, time spent

#### **Decision Influence**

% of decisions using the analytics product

#### **Business Outcome Metrics**

Revenue impact, cost savings, efficiency gains

#### **Retention & Satisfaction**

Return rate, NPS scores, user feedback

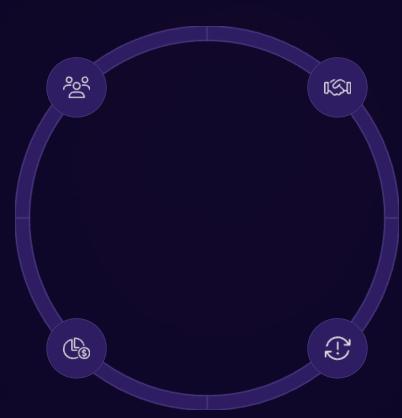

# When to Treat Analytics Like Products

#### **Cross-functional Initiatives**

Multiple teams depend on the insights

#### **Strategic Metrics Involved**

KPIs that drive business performance

### **High Stakeholder Dependency**

Executive decisions rely on the data

#### **Ongoing Iteration Needed**

Not a one-time analysis

# **Organizational Readiness**

### **Executive Sponsorship**

Leadership buy-in for product approach

#### **Collaboration Structures**

Cross-functional teams and workflows

### **Skills Development**

Product management capabilities for analysts

### **Incentive Alignment**

Rewards based on outcomes, not outputs

## Start Small. Build the Muscle.

#### **Identify One High-Impact Use Case**

Find a strategic decision need with clear value

#### **Apply the Canvas**

Define users, decisions, metrics, and success criteria

#### **Establish Clear Ownership**

Assign product owner and create a roadmap

#### **Track Adoption & Impact**

Measure usage and business outcomes

#### **Communication & Alignment are Key**

Weekly, Monthly, Quarterly discussions with the stakeholders

# Thank You!

Questions about implementing analytics as products in your organization?

### Strategic Analytics Implementation

Transform raw data into actionable insights through product-driven analytics

# **Cross-Functional Collaboration**

Bringing business and technical expertise together for maximum impact

### **Decision Intelligence**

Metrics that matter for driving informed business decisions

### The Future of Analytics

Leveraging GenAl and advanced tools to transform your data approach

# **Appendix**

# A Product Mindset: The Big Shift

Transforming analytics through a progressive approach:

#### **Solve Real Problems**

Focus on business needs, with good technical foundation

#### **Build Iteratively**

Continuous improvement, not one-and-done

#### **Test With Users**

Validate and refine based on feedback

#### **Mature Analytics**

Descriptive → Diagnostic →
Predictive → Prescriptive

This approach should be adopted for both Data Products and Data-As-A-Product models to flourish.

# **Data Mesh & Product Thinking**

### **Domain-driven Data Products**

Ownership aligned with business domains

#### **Self-service with Governance**

Freedom within guardrails

#### **Cross-functional Teams**

Business and technical expertise combined

#### **Federated Governance**

Distributed but consistent standards

# **Decision Intelligence**

Al-powered Recommendations ns

Suggested actions based on data patterns

Scenario Modeling Modeling

Impact analysis of potential decisions

**Explainable AI** 

Transparency in decision logic

Closed-loop Tracking Tracking

Measuring actual outcomes of decisions
