DECISION AUTOMATION

The journey from decision support to decision automation

WHAT IS DECISION AUTOMATION

This involves the use of algorithms & intelligent systems to analyze data, make predictions, and ultimately automate the decision-making process.

KEY BENEFITS

This can help businesses make decisions faster and more accurately, while also reducing the potential for human error or bias.

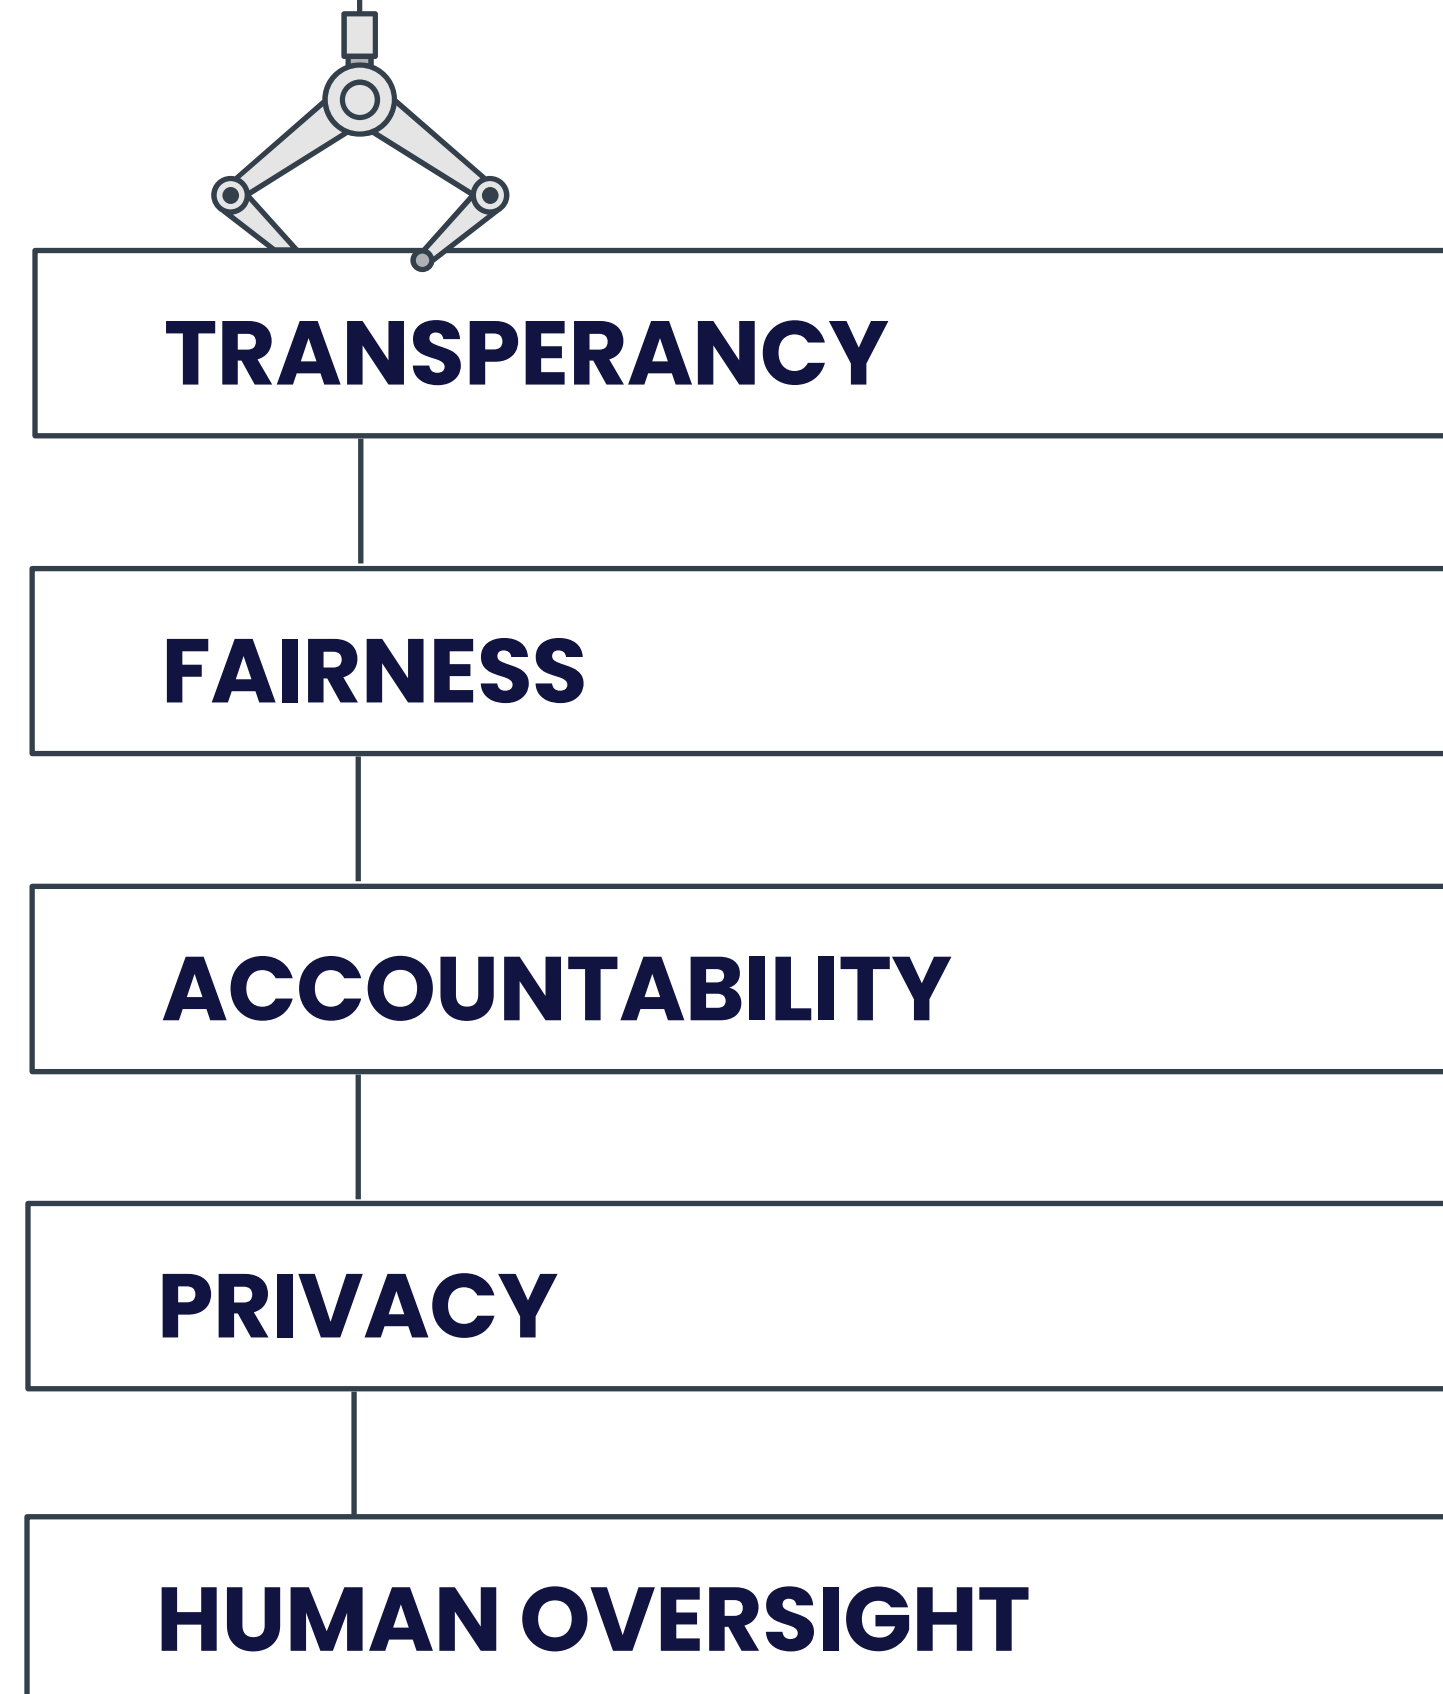

POTENTIAL DRAWBACKS

Inability to handle unique nuances of a particular situation, unable to handle unexpected or rare events, ethical concerns around automating certain decisions.

ETHICAL CONSIDERATIONS

Embracing Data Leader responsibility as an Enterprise AI leader

OPERATIONAL SCALABILITY

Operationalizing Decision Automation

**DATA
ANONYMIZATION**

**SECURE DATA STORAGE
AND TRANSMISSION**

**DATA
MINIMIZATION**

**ACCESS
CONTROLS**

**REGULAR AUDITS &
RISK ASSESSMENTS**

**PRIVACY BY
DESIGN**

DATA ANONYMIZATION

Identifying Potential Pitfalls

A

**Re-identification
risk /
Deanononymization**

B

**Reduction in
Data Quality**

C

**Incomplete
Contextual
Information**

D

**Inconsistent
Algorithms
across
datasets**

E

**Legal and
regulatory
requirements**

CDO/CDAO as Enterprise AI Leader

Embracing AI to move from Decision Support to Decision Automation

1

Develop an AI strategy

2

Establish governance structures

3

Foster a culture of responsibility

4

Build diverse teams

5

AI development and deployment

THANK YOU
