Q & A

Industry Statistics

8%

Successfully scale analytics to get value from their data according to McKinsey

8.1%

Of Executives state technology limitations as their primary impediment

79.8%

Of Executives believe that culture is the greatest impediment to becoming data driven. With 23.9% stating they are data driven and 20.6% have developed a data culture

Organisations are investing trillions to become more data driven – yet still struggling to maximise business value from these investments

Forester reports that **74%** of organisations want to be data-driven but only 29% are successful in connecting analytics to action.

2%

Of Executives ranked data literacy as their top investment priority

40.7%

Of data investments are in modernizing data platforms

23.8%

Of organisations report that they are doing enough to ensure responsible and ethical use of data

Actionable insights should link to your business and strategic initiatives to drive action that should be measured.

2. Forrester
3. McKinsey
4. Wavestone – Data and analytics leadership annual executive survey

Where are data leaders investing

Challenges to becoming data driven

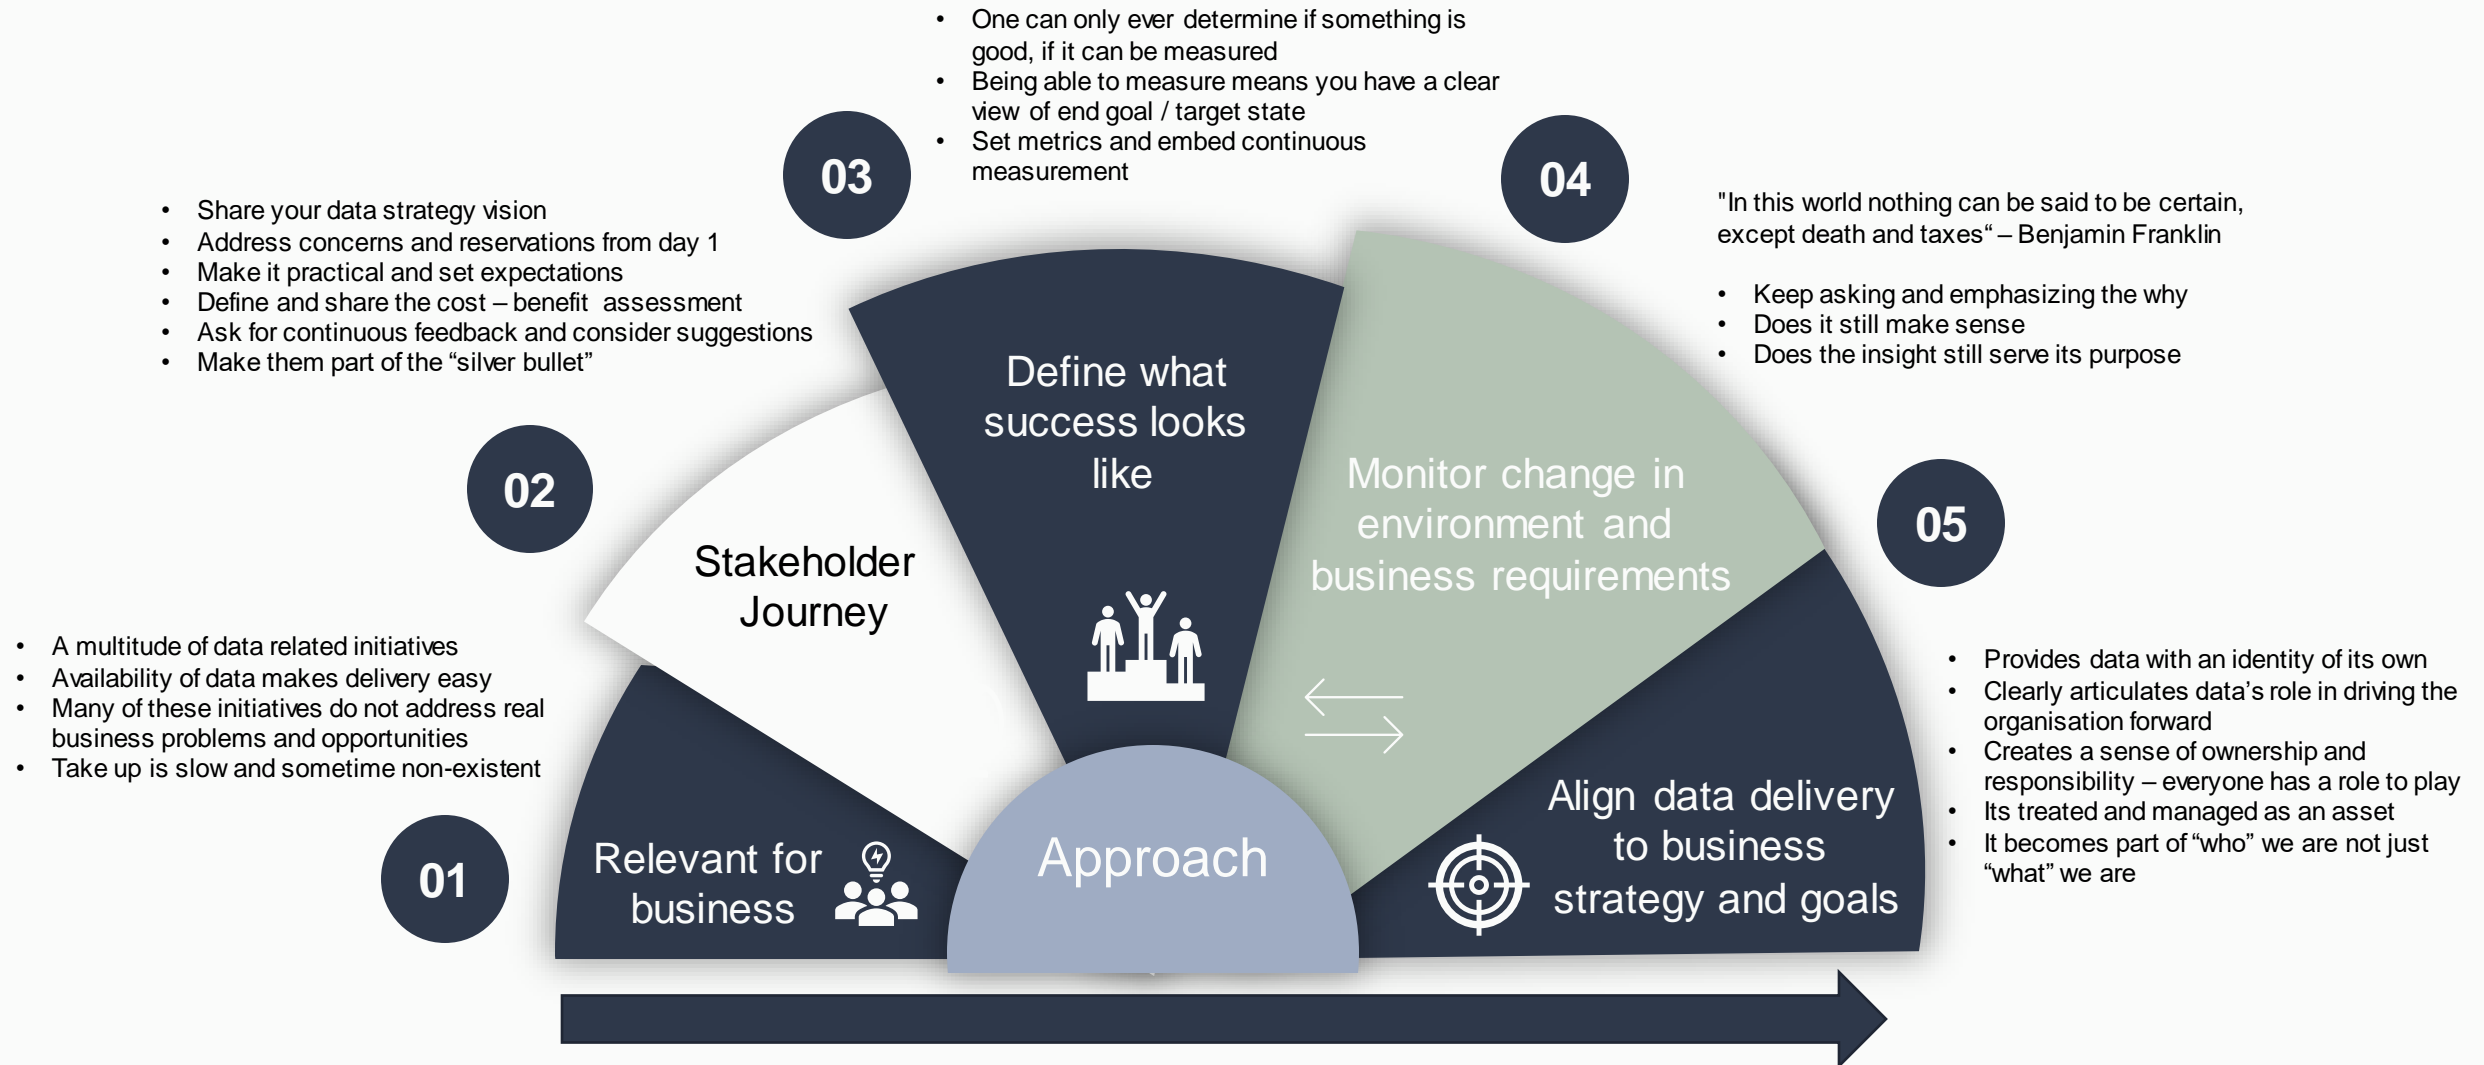

We focus mainly on “Tech” with modernising our data platforms, addressing data management issues, building out data as a product, AI and ML and applying various data architectures.

Data driven business use cases

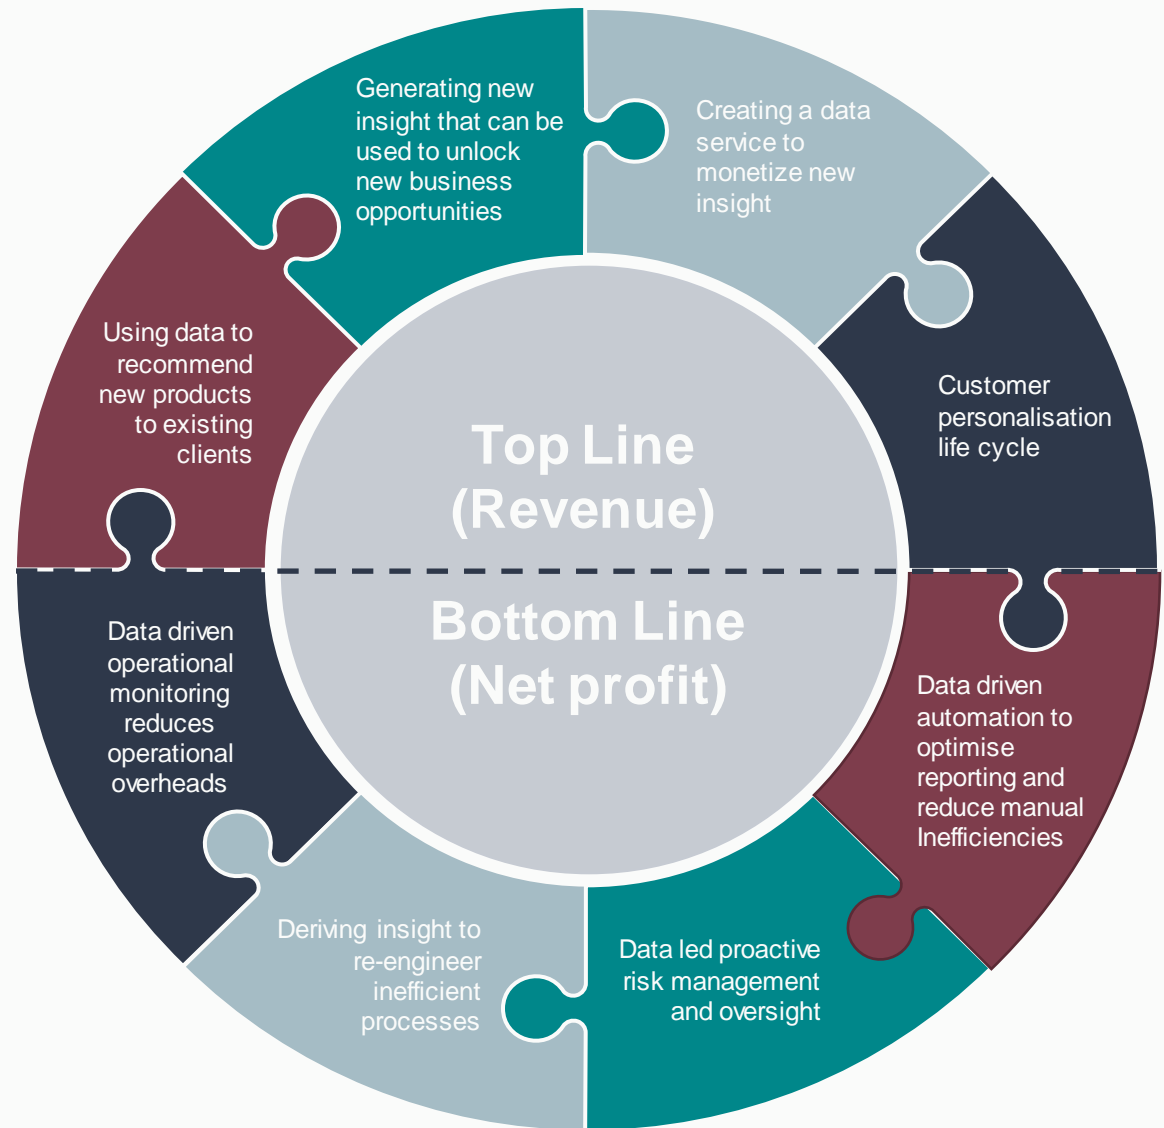

How to approach your data initiatives

How we think about measurement

- Define what success looks like
- In defining what success looks like, link your data initiative back to the business objectives they enable and how quickly you need to realise this value
- Define metrics that you can use to track progress through the life cycle of the data initiative
- Link every piece of business value either to top line (revenue) or bottom line (net profit)
- If a data initiative does not positively contribute to either top line or bottom line (in the short term or within a feasible long term), consider changing tack or even dropping the data initiative completely

Key Take aways

Approach data initiatives holistically in collaboration with your business that drive business value

Architecture

Define the business architecture to understand the language and content of the data domain – Built around business domains not systems

People

Organise people around a common business purpose

Enablement

Make use of enablement teams to facilitate adoption and accelerate delivery

Strategic Alignment

Align your data strategy with your business strategy to drive key business outcomes

Iterate and Evolve

Iterate through your high value use cases, aligned to business outcomes that will drive value

Data Culture

Develop a culture of data through various literacy programs and lower the barrier to entry by democratising Data across the organisation

Data Management

Continuously address data quality issues and improve maturity metrics

Thank you
