Reputation, Regulation and Risk: Navigating the Cybersecurity Tides

Murali Ayyappan Principal – New Business, Qualys

The R-Rated Realities of Cyber (SEA Edition)

THE RAGING THREAT LANDSCAPE: GLOBAL STORMS & LOCAL CURRENTS IN SEA

REPUTATION: HARD TO EARN, EASY TO LOSE

REGULATION: NAVIGATING
ASEAN'S EVOLVING
COMPLIANCE MAP

RISK: FROM SILOED STRUGGLES TO UNIFIED REGIONAL STRENGTH

The Only Constant is... More Threats

31%

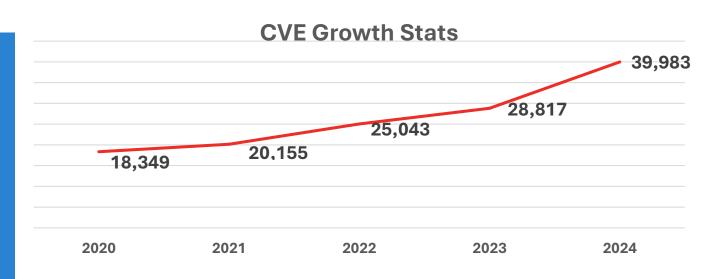

YOY Rate of CVE Growth

6.89

Average CVSS Score

133

Average CVEs per day

Average adversary breakout: 48 minutes

Fastest: 51 SECONDS

79% of detections are MALWARE-FREE.

Asia-based cybercrime syndicates expanding worldwide from SEA.

Attack Vectors: They're Getting Creative (and AI-Powered!)

Vishing attacks up 442%
Use of deepfakes surged 1500%.

Help desk social engineering rising.

GenAl is a "force multiplier" for adversaries – better social engineering, faster development.

SEA Context: Ransomware, RATs, infostealers still huge in SEA, often via email. QR code scams emerging.

Current state of Vulnerability Management

The High Cost of a Tarnished Reputation

The scale of SEA-based cybercrime syndicates (fraud, trafficking) creates significant regional reputational risk.

Darknet markets facilitate this

DBIR: Third-party breaches (doubled to 30%) amplify this.

Regulation: The Ever-Expanding Maze

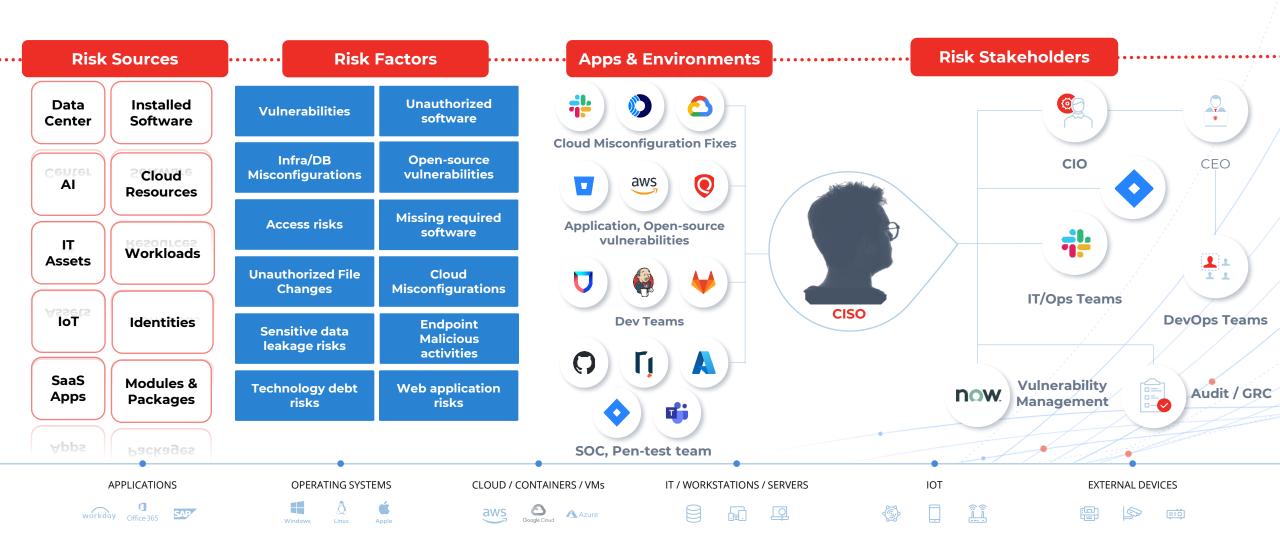

Expect more focus on supply chain security.

Risk of being cut off from international systems if anti-cybercrime measures are deemed insufficient.

The Numerous Sources of Cyber Risk

...and New Stakeholders to Communicate With

Challenge of Risk Prioritization

Managing Attack Surface for Business

Knowing Assets

- × Hybrid Environment, Dynamic assets
- Lacks context from Business

Lack of Business context and Noise

resulting in More work post VM, Risk assessment & Remediation

Unable to view unified 'Toxic Insights' from siloed findings

31%

Assets **unknown but** known your attackers!, from where the attacks start

45%

Of critical assets are missing business criticality, context

78%

50%

Vulns High/Critical Vuln Risk due to by CVSS Tech Debt of Only 18% with EOL/EOS Software evidence of attacks

33%

Software are not required, increasing attack surface, cost and efforts on VM, Patch

Charting the course forward - The Rise of the Risk Operations Center (ROC)

Centralized Risk Orchestration

Foundations of a Risk Operations Center (ROC)

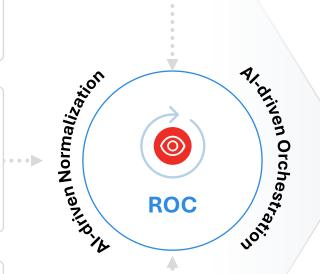

Security Posture Data

Centrally aggregated security posture data (vulnerabilities & misconfigurations) from asset-specific tools

Threat Intelligence

Business Context

Contextualization with asset criticality and business impact metrics along with attribution of asset and risk ownership to enable automated workflows

One Platform for Centralized Risk Orchestration

Enrich with Threat Intelligence

Enrich risk data with Qualys-curated feeds from 25+ threat intelligence sources.

Quantify with Business Context

Add business context to quantify cyber risk in monetary terms by evaluating loss attributes and value at risk (VAR).

Prioritize with TruRisk[™] Score

Prioritize risks by factoring in severity, exploitability, asset criticality & business impact.

Risk Factors Aggregation

Consolidate risk findings across different asset types—including VMs, OT/IOT, cloud, code, user identities & more.

Unified Asset Inventory

Visualize your attack surface with a unified asset inventory, integrating data from Qualys and third-party sources.

>>

Risk Response Orchestration

Orchestrate precise risk response using Aldriven workflows for "patchless" remediation, automated tickets & real-time alerts.

Compliance & Executive Reporting

Ensure compliance readiness with tailored executive reporting and detailed audit trails.

Thank You
