

THE DATA SECURITY PLATFORM BUILT FOR THE AI ERA

Continuously discover and classify critical data, remove exposures, and stop threats in real time with AI-powered automation.

Not all solutions are created equal.

The data security market is full of point solutions and projects that fail often and fail slowly. Data classification vendors try to catalog sensitive data, but can't tell you if its exposed or under attack. IaaS-only DSPM vendors can only see part of your data estate, causing fragmented data visibility and security policies. Varonis is the only fully-automated DSP that reduces your likelihood of data breach while you sleep.

OUR AUTOMATION ADVANTAGE

Real-time visibility

- + Full scans on huge data stores. No blind spots
- + Know if critical data is exposed, labeled, or under attack
- + Monitor all data activity. Visibility is always current

Automated prevention

- + Ensure users and AI copilots can only access the right data
- + Fix misconfigurations and remove ghost users
- + Enforce labeling, DLP, and data residency policies

Proactive detection

- + Hundreds of AI-powered UEBA threat models
- + Real-time alerts and automated threat response
- + 24x7x365 MDDR service and threat hunting

One platform. All your data.

Varonis protects enterprise data where it lives — in the largest and most important data stores and applications across the cloud and behind your firewall.

✓ SaaS

✓ IaaS

✓ File shares

✓ Databases

✓ Email

✓ Hybrid NAS

Reduce your risk without taking any.

Our free data risk assessment takes minutes to set up and delivers immediate value. In less than 24 hours, you'll have a clear, risk-based view of the data that matters most and a clear path to automated data security.

Get started at www.varonis.com/demo.

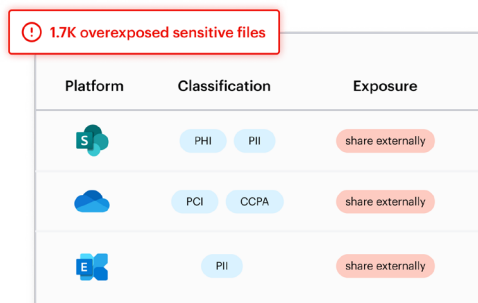

MICROSOFT 365 COPILOT READINESS ASSESSMENT

It's critical to improve your data security posture before your Copilot rollout. Varonis provides a free assessment that gives you a real-time view of gen AI risk in M365, automatically limits Copilot's data access, and alerts you to abnormal activity.

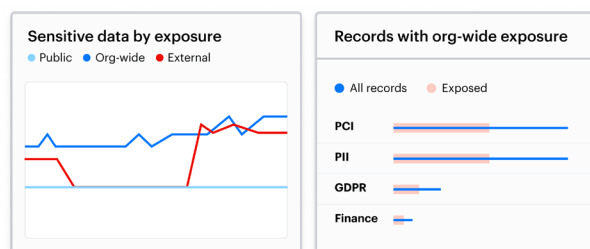

Classify and label data Copilot creates.

Automatically discover, classify, and label sensitive and regulated data with extreme accuracy.

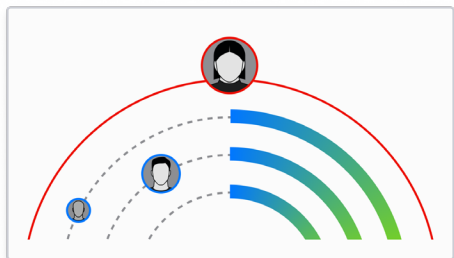

Enable downstream DLP controls.

Ensure AI-generated data is correctly labeled so your DLP policies work as intended.

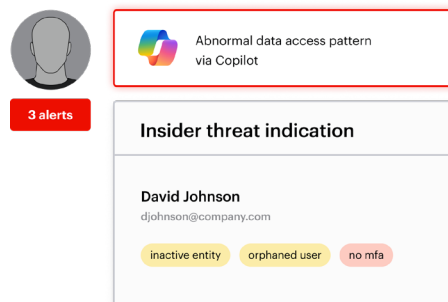

Reduce Copilot's blast radius.

Continually remediate data exposed to Copilot via excessive permissions with intelligent automation.

Monitor Copilot activity in real-time.

Get a searchable log with who, what, when, where, and how details. Alert on suspicious behavior.

To help mitigate risk, Microsoft recommends securing sensitive data before rolling out Copilot by “making sure your organization has the right information access controls and policies in place.”
